Internship Worklog - Week 3

Name: Dhruv Jain (Data Intern)
Reporting Period: 26 October - 30 October 2026

Monday, 26 October 2026 - Product Audit & Data Architecture Mapping

- Conducted an exhaustive product audit of the Digii Campus core modules (CHC, Access Management, Feed, and Infrastructure) via the BI portal and official documentation.
- Mapped end-to-end user journeys for administrators, faculty, and students to identify operational bottlenecks and data collection gaps.
- **PM & Data Focus:** Formulated the primary problem statements for operational modules. Analyzed the underlying data schemas to understand how grievance tickets in CHC could be structured for predictive analytics rather than just retrospective reporting.
- **Outcome:** Established the foundational product architecture map required for the week's strategic enhancement research.

Tuesday, 27 October 2026 - Infrastructure & Resource Optimization Modeling

- Deep-dived into the Hostels, Mess, Booths, and Assets modules, analyzing how Digii Campus currently digitizes physical campus infrastructure and captures student usage data.
- **PM & Data Focus:** Engineered a theoretical data-integration model. Explored how cross-referencing transactional data matrices (e.g., joining daily Mess check-in logs with Hostel leave approval statuses) could build a predictive resource optimization model.
- Began drafting enhancement proposals focused on institutional ROI, specifically targeting the reduction of campus waste through intelligent data routing.
- **Outcome:** Developed the core data pipelines and product concepts for the "Predictive Campus Resource Engine" strategy.

Wednesday, 28 October 2026 - Academic-to-Career Workflow Gap Analysis

- Executed a systematic evaluation of the Outcome-Based Education (OBE), Student E-Portfolio, and Placements modules.
- **PM & Data Focus:** Conducted a critical gap analysis on the transition from academic competency tracking to employability. Identified a structural data gap: while OBE measures specific rubric-backed outcomes, the Placements module relies on unstructured CVs and broad CGPA metrics, failing to utilize granular competency data for recruiter filtering.
- Designed a product bridge ("Competency-to-Career Matchmaker") to sync validated E-Portfolio evidence directly with recruiter search algorithms.
- **Outcome:** Finalized the academic and career enhancement proposals, directly linking institutional learning outcomes to actionable placement data.

Thursday, 29 October 2026 - Solution Architecture & Report Drafting

- Synthesized the week's product audits, data-mapping exercises, and gap analyses into a structured Product Research Report.
- **PM & Data Focus:** Applied the rigorous "Assess-Support-Adapt" logical framework (previously used in the Non-Academic framework) to the new enhancement proposals. Documented the explicit business value and data dependencies for each new feature.
- Ensured all proposed enhancements are feasible extensions of the current relational database architecture rather than requiring complete system rebuilds.
- **Outcome:** Produced the first complete draft of the comprehensive Product Research and Enhancement Report.

Friday, 30 October 2026 - Executive Review & Deliverable Finalization

- Refined the Product Research Report, ensuring strategic alignment with Digii Campus's overarching goal of creating an intelligent, data-driven ecosystem.
- Validated all proposed data workflows against the existing capabilities listed on digiicampus.com to guarantee the proposals represent genuine innovation.
- Finalized the formatting, executive summaries, and presentation logic for the weekly submission.
- **Outcome:** Successfully finalized both the Weekly Worklog and the Detailed Product Research Report for submission to Mr. Suraj Bhatt.

Week 3 Summary

During the third week, the primary focus shifted toward a hybrid Product Management and Data Analytics approach. Moving beyond basic portal familiarization, the objective was to understand the core operational problems each module solves and identify missing data linkages. By deeply analyzing modules like CHC, Hostels, OBE, and Placements, several functional gaps were identified where transactional data remains siloed. Consequently, actionable, data-driven product enhancements were proposed—such as predictive support analytics, dynamic resource optimization, and competency-to-career matching—designed to elevate the platform into an intelligent, predictive campus ecosystem.
